# Vladimir Cuc

**AI Security Engineer & Penetration Tester**

(863) 338-7723 | vladimircuc007@gmail.com | linkedin.com/in/vladimir-cuc | github.com/vladimircuc | vladimircuc.com

OSCP+ and Security+ certified Computer Science graduate, bringing Fortune 100 SOC experience in alert triage, incident response, and forensic imaging, plus an attacker's view from hands-on penetration testing and malware analysis. Building GenAI and agent automation with a development mindset, from scheduled AI reporting to a live six-engine AI audit.

## PROFESSIONAL EXPERIENCE

**Web Systems & Automation Engineer** | *Posted Social* | St. Louis, MO — Feb 2026 - Present

- Automated weekly client campaign reporting with scheduled AI tasks, so reports that once took 3 to 4 hours to build by hand are ready before the Monday team meeting starts.
- Hardened the multi-tenant platform I built for 50+ clients with Claude Code assisting, using HMAC-signed OAuth state against CSRF and an egress guard against SSRF.

**Cybersecurity Intern** | *Publix Super Markets* | Lakeland, FL — May - Jul 2025

- Triaged 200+ security alerts in Microsoft Defender EDR and ServiceNow at a Fortune 100, writing Splunk queries with regex and entity-based analysis to confirm or rule out real breaches.
- Worked incident response on suspicious Windows endpoint activity, coordinating containment and remediation tracking with the engineering teams that owned each system.
- Acquired compromised Windows endpoints into forensic E01 images for compromise assessment, then signed and held the chain-of-custody record until handoff to a full-time team member.
- Hunted threats across enterprise endpoints and mapped findings to MITRE ATT&CK and the Cyber Kill Chain.
- Tuned SIEM alert thresholds and reviewed Defender EDR detection logic to close coverage gaps, which cut false positives and saved $10K+ a year in analyst investigation time.
- Supported red-team engineers with Active Directory enumeration, Kerberoasting validation, and privilege-escalation testing, giving detection tuning an attacker's view.

**IT Support Technician** | *Florida Southern College* | Lakeland, FL — Oct 2022 - Dec 2025

- Served as first contact for Tier 1 support across 100+ users at a 95% first-attempt resolution rate, resolving lockouts and MFA failures and documenting each case for the next tier.

## CERTIFICATIONS

- **OSCP+ (Offensive Security Certified Professional), 2025**
- **CompTIA Security+, 2025**

## PROJECTS & PUBLICATIONS

**AI Visibility Audit, Live GenAI Product Built at Posted Social:** A public tool I built and shipped that asks six AI engines, ChatGPT and Claude among them, which local businesses they recommend, runs 29 site checks in about four minutes, and guards the paid model calls with Turnstile and an atomic daily spend cap (ai-audit.posted-social.com).

**Malware Lab, AsyncRAT Analysis, and 10+ Walkthroughs:** An isolated FLARE VM and REMnux lab I built behind simulated internet services, used to take apart a real AsyncRAT sample down to its hidden loader, process injection, C2 beaconing, and registry persistence, plus 10+ published attack walkthroughs (medium.com/@vladimircuc007).

**QUORRA, Tool-Calling AI Agent:** A FastAPI assistant our three-person team built for a startup partner, where I owned the backend and the OpenAI tool-calling layer: the model can only request one of four tools and the backend decides whether to run it (github.com/vladimircuc/QUORRA-Asera-Custom-LLM).

**RaptorRecon and DragonMap, Open-Source Security Tooling:** Two Bash frameworks I wrote for multi-target reconnaissance and credentialed Active Directory enumeration (github.com/vladimircuc).

## TECHNICAL SKILLS

**Incident Response & SOC:** Incident Response, Alert Triage, Microsoft Defender EDR, Splunk SIEM, ServiceNow, Log Analysis, Forensic Imaging (E01), Chain-of-Custody, MITRE ATT&CK

**Detection & Scripting:** SPL, KQL, YARA, Sigma, Regex, Python, PowerShell, Bash, SQL

**Malware, Network & Systems:** FLARE VM / REMnux, Static & Dynamic Analysis, Wireshark, Process Monitor, TCP/IP, DNS, HTTP/HTTPS, Windows, Linux, Active Directory

**Offensive & Web Security:** OWASP Top 10, CSRF & SSRF Defenses, Web Application Testing, Burp Suite, Nmap, BloodHound, Impacket, Kerberoasting, Privilege Escalation

**GenAI & Agent Automation:** Scheduled AI Task Automation, Claude Code (AI-Assisted Development), LLM Tool-Calling / Agents, OpenAI, Anthropic & Gemini APIs, LLM Output Evaluation, RAG Pipelines (FastAPI + pgvector), Prompt Engineering

## EDUCATION

**Bachelor in Computer Science** | Florida Southern College | GPA 3.8, Magna Cum Laude, Dean's List (4x) — December 2025
